Amendments to the Claims

1 (Currently Amended). An insect monitor comprising:

a base;

a lid hinged at one edge to the base, in which the lid can be displaced between an open position and a closed position and in which an aperture which extends substantially around the periphery of the base and lid is defined between the base and the lid when the lid is in the closed position; and

an insect attracting sheet received within the base; and

in which the lid includes at least one lifting member which can engage the insect attracting sheet while the lid is moved between its open and closed positions so that the distance between the sheet and the base is greater when the lid is in the open position than when it is in the closed position.

2 (Previously Presented). An insect monitor according to claim 1 in which the base includes a side wall having internal and external surfaces which defines the space in which the insect attracting sheet is received.

3 (Original). An insect monitor according to claim 2 in which the side wall has a gap in it which is located so that the lifting member can move through the gap as the lid is moved between its open and closed positions.

4 (Cancelled).

5 (Cancelled).

6 (Previously Presented). An insect monitor according to claim 2 in which the external surface of the wall of the base slopes upwardly.

7 (Previously Presented). An insect monitor according to claim 2 in which the internal surface of the wall of the base is substantially vertical.

8 (Previously Presented). An insect monitor according to claim 1 in which at least two projecting members extend from the lid, said at least two projecting members being adapted to cooperate with the at least one lifting member to support the insect attracting sheet as the lid is moved to the open position.

9 (Previously Presented). An insect monitor according to claim 2 in which the side wall is provided with at least one clip.

10 (Cancelled).

11 (Cancelled).
